SUMMARY

Senior full-stack engineer with 8+ years building and shipping software products. Skilled in CI/CD, DevOps, platform engineering, and AI product engineering, with extensive experience using AI coding agents.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, C#
- **Frameworks:** React, React Native, Node.js, Express, Angular, Vue.js, Django, Flask, .NET
- **AI:** Coding Agents, Declarative Generative UI, LLM-as-a-Judge Evaluation
- **Developer Infrastructure:** Monorepo Build Systems and Caching (Lage, BuildXL), CI/CD (Azure DevOps), Docker, Automated Performance Testing
- **Experimentation & Delivery:** Feature Flags, A/B Testing, Staged Rollouts
- **Azure:** Functions, Event Hubs, Storage Accounts, Cosmos DB, Azure Database (PostgreSQL, MySQL), KQL
- **AWS:** Lambda, Kinesis, S3, DynamoDB, Aurora (PostgreSQL, MySQL)

EXPERIENCE

Senior Software Engineer

MICROSOFT | Mar 2025 to Present | Nairobi, Kenya

- Shipped file-result cards in Microsoft 365 Copilot and built research-agent infographics using declarative generative UI: agents return JSON specs that the client renders with predefined components.
- Led pre-release LLM-as-a-judge UX evaluations, in which file-result cards outscored text-only answers for a cleaner experience and new action buttons.
- Fixed recurring failures in build and release pipelines serving ~1,500 engineers and ~7,000 monthly pull requests, helping raise success rates from 55-60% to over 90% in six months.
- Cut CDN upload failures from 4% to under 1% by capping parallel uploads that exhausted memory.
- Implemented automated browser performance tests that compare pull requests against a baseline, shifting regression handling from reactive reverts to proactive pre-merge detection.
- Co-developed Azure Pipelines execution for an AI coding agent in a large monorepo; with repo-specific setup, the agent wrote better code, needed fewer human-in-the-loop iterations, and had more PRs merged.
- Implemented sovereign-cloud release pipelines and deployment scripts, gating every release on manual approval by authorized developers.

Software Engineer II

MICROSOFT | Apr 2021 to Mar 2025 | Nairobi, Kenya

- Led efforts to deliver application bundles through CDNs across public and sovereign clouds, establishing release pipelines, approval gates, and incident-response processes.
- Led the team's top-priority migration of a product repository into a shared JavaScript monorepo, resolving broken bundles and bundle-size regressions to ship its web and native code.
- Reduced monthly Azure build and infrastructure costs by 76% through right-sizing build-agent pools, shortening retention of cached build outputs, and deleting unused resources found in a subscription audit.
- Mentored an intern to deliver remote build caching for cloud development environments within the internship, cutting average build time for key packages by 53%.

Senior Backend Engineer, Consultant (Part-time)

FERNHEALTH | Sep 2021 to Sep 2023 | Remote (engaged through MentorMate)

- Designed and built an event-driven backend for mobile applications using AWS Lambda and Amazon Kinesis.
- Built a webhook-driven pipeline that transformed Contentful CMS updates into the mobile app's data model and stored the content in DynamoDB.

Software Developer

ANDELA | Jul 2018 to Apr 2021 | Nairobi, Kenya (remote placements with US clients)

Remitly | Jan to Apr 2021

- Reworked web and mobile money-transfer flows to make sending easier, fees clearer, and transfer progress visible.
- Rolled out changes behind feature flags and A/B-tested alternative flows, measuring completion rate and time to send money.

Venuex | Team Lead | Apr 2019 to Jul 2020

- Led a team of two to build an event-management platform from scratch and helped launch it for 20+ venues; coordinated requirements, timelines, and budgets.
- Reduced initial display time for a guest list with 500+ entries by 50% using list virtualization.

Internal products | Jul 2018 to Apr 2019

- Raised frontend test coverage from ~20% to 53% on an incident-reporting platform built for operations and HR teams.
- Co-developed the MVP of an employee travel platform, focusing on itinerary-management features.

Software Developer, Contract (Part-time)

SOVTECH | Apr 2020 to Mar 2021 | South Africa

- Led a team responsible for a portfolio of client products; coordinated maintenance and feature delivery, and mentored junior engineers.
- Translated client requirements into customer-facing features and shipped them to production.
- Maintained and enhanced web and mobile products for multiple clients using React, React Native, Angular, Vue.js, and serverless AWS services.

Instrumentation and Control Engineer

BIDCO AFRICA LTD | Sep 2015 to Jun 2018 | Kenya

- Built automated alerts for machine breakdowns, cutting response time by at least one hour.
- Developed control software for programmable logic controllers (PLCs) and microcontrollers to automate manufacturing processes.

EDUCATION

BSc, Electronics and Computer Engineering

Jomo Kenyatta University of Agriculture and Technology | 2009 to 2015

Diploma, Oracle Certified Associate and Linux System Administration

Institute of Software Technologies | 2015
